Invitation to participate in a Terrestrial Laser Scanning Software study

Hello,

Let me first introduce myself then describe the study. I am a graduate student at the Geomatics Department of Purdue University, IN, USA, and am currently embarking on a research project involving Terrestrial Laser Scanning.

My interest is in the area of "Automatic Registration" and I am conducting a survey to assess the current capabilities of software packages with regard to automatic registration.

Respondents to the survey will be software vendors who provide various packages for processing Terrestrial Laser Scanning data and I have identified your organization as such. The survey is setup to ensure anonymity of respondents and only general statistics will be used.

The survey contains 12 questions and is accessible via the URL at the end of this document. I have set the **survey to remain open until June 30th, 6.00pm (EDT)** but please note that the survey must be completed within **72 hours** of accessing the URL.

Some organizations are quite large and may contain many different laser scanner users. If more than one person in your organization is interested in participating in the study then the survey software requires that each person uses a different computer.

Much thanks for your participation,

Darion Grant
